## Everything from one source

With more than 40 years of experience at home and abroad, we successfully supply used and reconditioned inventory and medical equipment for hospitals solely as complete solutions to our international clientele.

For our global customer base in South America, Central America, Africa, Middle East and Asia **we will be able to supply complete hospitals from 120 beds upwards** for the general provision including operating rooms and intensive care units of different departments with pre-owned inventory and hospital equipment. Due to the consolidation process in the German healthcare system, hospitals are being closed or merged together. If the equipment is fairly new (3–5 years old), we buy and store them in our facilities. Once a contract is signed, all equipment will be serviced and we will deliver them immediately with a German warranty to any place. If required we can also deliver new special equipment, eg x-ray, MRT, CT as part of the package.

## The best way for low cost solution with pre-owned equipment for up to 15 % from new price

German high quality pre-owned equipment will be only delivered after intensiv service/maintenance work and with German authority world wide warranty. It is therefore an excellent cost-benefit ratio
